

Order Receipt and Database Entry

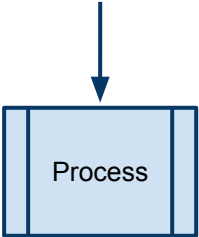

Workflow begins with
Orders Received

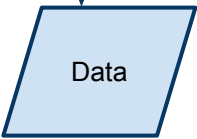

Orders arrive at API
endpoint /order/new
as JSON object

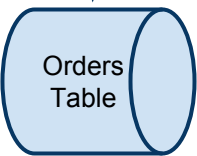

JSON object contains
both ordered units and
shipping info.

Parse object into
order data and
user data
Apply Timestamp

Parsed order data

Submit to new orders.
Auto-Gen tracking #
(orderId)

We need to define
what to do with
shipping info during
processing cycle

Stock Checking
Workflow
begins here
